## FURTHER WIDE HIGH-GRADE COPPER INTERSECTIONS REPORTED FROM LANA CORINA PROJECT, CHILE

Culpeo Minerals Limited (**Culpeo** or the **Company**) (**ASX:CPO**) is pleased to announce further significant high-grade copper intersections from drilling at its Lana Corina Project in Chile (the **Project**) and confirmation of near-surface targets for the Phase 2 program.

### Highlights

- **CMLCD009 intersects wide zones of high-grade copper mineralisation including:**
  - 19m @ 0.75% Cu and 110ppm Mo (331m to 350m);
  - 11m @ 0.83% Cu and 197ppm Mo (405m to 416.1m); and
  - Within 113m @ 0.60% Cu and 122ppm Mo (331m to 444m)
- Phase 1 Drilling complete with large copper bearing body defined by 7 holes intercepting significant copper and molybdenum mineralisation including:
  - CMLCD002 - 257m @ 0.95% Cu, 81ppm Mo from 170m<sup>2</sup>;
  - CMLCD003 - 173m @ 1.05% Cu, 50ppm Mo from 313m<sup>3</sup>;
  - CMLCD005 - 81m @ 1.06% Cu, 145ppm Mo from 302m<sup>4</sup>;
- 3D inversion modelling of the recently acquired **ground magnetic data<sup>1</sup>** shows a **large magnetic low below the outcropping breccia hosted mineralisation** confirming its correlation between significant widths of copper mineralisation encountered in deeper drilling, refer Figure 1.
- A significant portion of this **large anomaly remains untested with mineralisation defined over 200m x 300m x 400m deep and open in all directions**, refer Figures 1 and 2.
- Surface mapping in progress to prioritise the **13 high priority breccia targets identified** over an area of 800m by 1,000m, indicative of a large copper porphyry system.

Culpeo Minerals' Managing Director, Max Tuesley, commented:

"The Phase 1 diamond drilling program at Lana Corina has been very successful, with 7 of the 9 holes hitting substantial copper and molybdenum. Significant, thick, high-grade, copper-molybdenum mineralisation has been confirmed, extending from the outcropping surface breccia pipes to over 400m vertical depth.

The high-grade zone hosted within the breccia pipes, has an ideal geometry for open-pit mining and the potential of discovering additional near surface mineralisation is high. Ground magnetic data shows a strong correlation between a large magnetic low and where deeper drilling has intersected significant widths of high-grade copper and molybdenum mineralisation, this provides an important tool for target generation.

Surface mapping and the integration of geology, geophysical and geochemical data is progressing well, with this information being integral to the planning of the Phase 2 drilling program which will target the 13 near surface targets (refer Figure 3) including the deeper copper-molybdenum mineralisation."

Figure 2: Plan view showing position of drillholes and targeted breccia units (Datum PSAD56 / UTM 19S)

## Completion of Successful Maiden Drilling Program

Hole CMLCD009 has returned multiple copper and molybdenum downhole intersections including 19m @ 0.75% Cu and 110ppm Mo (331m to 350m) and 11m @ 0.83% Cu and 197ppm Mo (405m to 416.1m), all within **113m @ 0.60% Cu and 122ppm Mo from 331m** which is consistent with the exploration model and supports the Company's belief the Lana Corina mineralised system has substantial size and grade.

Figure 3. Plan view of high-resolution ground magnetic data (high pass TMIRTP), showing position of Lana Corina prospect and high priority targets identified from geophysical data (refer ASX announcement 18 May 2022).

Significantly, 3D inversion modelling of the recently acquired ground magnetic data shows a large magnetic low below the outcropping breccia hosted mineralisation, correlating closely with significant widths of copper/molybdenum mineralisation encountered in deeper drilling. A significant portion of this large anomaly remains untested, and mineralisation is open to the west, south and at depth.

Hole CMLCD008 was drilled to the north of the main mineralised zone and intersected high-grade near surface mineralisation (**3m @ 1.15% Cu and 10ppm Mo from 104m**) hosted within a crackle breccia (Figure 4). This mineralisation is 50m northwest of the recent breccia discovery report in drillhole CMLCD005<sup>4</sup> and highlights the potential for additional mineralisation at surface and depth in this area.

Figure 4: High-grade near surface Cu mineralisation, CMLCD008.

The Lana Corina Phase 1 diamond drilling program is now complete with significant results reported for 7 of the 9 holes completed.

<sup>5</sup> Refer ASX announcement 19 July 2022

Highlights include:

- o CMLCD001 - **104m @ 0.74% Cu, 73ppm Mo from 155m<sup>1</sup>**;
- o CMLCD002 - **257m @ 0.95% Cu, 81ppm Mo from 170m<sup>2</sup>**;
- o CMLCD003 - **173m @ 1.05% Cu, 50ppm Mo from 313m<sup>3</sup>**;
- o CMLCD005 - **81m @ 1.06% Cu, 145ppm Mo from 302m<sup>4</sup>**;
- o CMLCD007 – **34.7m @ 0.91% Cu, 71ppm Mo from 515m<sup>5</sup>**;
- o CMLCD008 - **3m @ 1.15% Cu, 10ppm Mo from 104m**; and
- o CMLCD009 - **19m @ 0.75% Cu, 110ppm Mo from 331m**.

Increased understanding of copper mineralisation and geometry demonstrates that the Project has strong potential to host large scale, near surface, high-grade copper and molybdenum mineralisation.

The Company is awaiting assay results for holes CMLCD001A, CMLCD004 and CMLCD005A which intersected old workings and channel sampling of the 13 recently identified high resolution ground magnetic targets; these results will be released as they come to hand.

## Lana Corina Drilling Program

Immediately after securing rights for up to 80% of the Project, Culpeo began a maiden drilling program at Lana Corina to test high-grade copper mineralisation which outcrops at surface. Lana Corina is associated with a structural zone orientated in a northeast-southwest direction with >1km of strike and up to 400m wide. The initial 5,000m diamond drilling program comprised 9 holes targeting breccia and porphyry hosted high-grade copper mineralised zones.

Assay results have now been reported for diamond drillholes CMLCD001, CMLCD002, CMLCD003 CMLCD005, CMLCD006, CMLCD007, CMLCD008 and CMLCD009. The mineralisation encountered in the drillholes to date is associated with shallow high-grade breccia hosted mineralisation near surface and deeper high-grade porphyry hosted mineralisation at depth. Significant potential exists to expand the mineralised zone to the northwest and at depth to the south given the results of recent drilling.

The Phase 2 drilling program is currently being planned, with a review of geological, geophysical and geochemical data in progress. A detailed geological mapping program is currently underway at Lana Corina and results of this work will be communicated in due course.

This announcement has been authorised by the Board of Directors of Culpeo Minerals Limited.

## About Culpeo Minerals Limited

Culpeo Minerals is a copper exploration and development company with assets in Chile, the world's number one copper producer. The Company is exploring and developing high grade copper systems in the coastal Cordillera region of Chile.

The Company has recently acquired the Lana Corina Project situated in the Coquimbo region of Chile, where near surface breccia hosted high-grade copper mineralisation offers walk up drilling targets and early resource definition potential.

The Company has two additional assets, the Las Petacas Project, located in the Atacama Fault System near the world-class Candelaria Mine. Historic exploration has identified significant surface mineralisation with numerous outcrops of high-grade copper mineralisation which provide multiple compelling exploration targets. The Quelon Project located 240km north of Santiago and 20km north of the regional centre of Illapel, in the Province of Illapel, Region of Coquimbo. Historical artisanal mining has taken place within the Quelon Project area, but modern exploration in the project area is limited to rock chip sampling and geophysical surveys.

Culpeo Minerals has a strong board and management team with significant Chilean country expertise and has an excellent in-country network. All these elements enable the company to gain access to quality assets in a non-competitive environment. We leverage the experience and relationships developed over 10 years in-country to deliver low cost and effective discovery and resource growth. We aim to create value for our shareholders through exposure to the acquisition, discovery and development of mineral properties which feature high grade, near surface copper mineralisation.

### Competent Persons' Statements

The information in this announcement that relates to Exploration Results is based on information compiled by Mr Maxwell Donald Tuesley, BSc (Hons) Economic Geology, MAusIMM (No 111470). Mr Tuesley is a member of the Australian Institute of Mining and Metallurgy and is a shareholder and Director of the Company. Mr Tuesley has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Tuesley consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

The information in this announcement that relates to Geophysical Results is based on information compiled by Nigel Cantwell. Mr Cantwell is a Member of the Australian Institute of Geoscientists (AIG) and the Australian Society of Exploration Geophysics (ASEG). Mr Cantwell is a consultant to Culpeo Minerals Limited. Mr Cantwell has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources & Ore Reserves. The Company confirms that it is not aware of any new information or data that materially affects the historical geophysical results included in the original reports.

## Appendix B – Significant Downhole Intersections (CMLCD008 and CMLCD009)

| Hole_ID  | From (m) | To (m) | Interval | Cu (%) | Mo (ppm) | Ag (g/t) | Au (g/t) |
|----------|----------|--------|----------|--------|----------|----------|----------|
| CMLCD008 | 104      | 107    | 3        | 1.15   | 10       | 6        | 0.050    |
| CMLCD009 | 31.2     | 34.7   | 3.5      | 0.27   | 27       | 3        | 0.007    |
| CMLCD009 | 289.5    | 324    | 34.5     | 0.46   | 90       | 2        | 0.012    |
| CMLCD009 | 331      | 444    | 113      | 0.60   | 122      | 4        | 0.010    |
| CMLCD009 | 464      | 467.5  | 3.5      | 0.57   | 16       | 4        | 1.010    |
| CMLCD009 | 536      | 539    | 3        | 0.48   | 12       | 3        | 0.003    |

Notes: No top cut has been applied, grade intersections are generally calculated over intervals >0.2% Cu where zones of internal dilution are not weaker than 2m < 0.1% Cu. Bulkied thicker intercepts may have more internal dilution between high-grade zones.

## Appendix C - Historical Drilling Summary – Lana Corina Project

| Hole # | Northing  | Easting | Azimuth | Dip | Hole Depth (m) |
|--------|-----------|---------|---------|-----|----------------|
| COR-1  | 6,554,938 | 298,424 | 40      | -60 | Unknown        |
| COR-2  | 6,554,937 | 298,425 | 85      | -60 | 71             |
| LAN-1  | 6,555,003 | 298,496 | 103     | -70 | 80             |
| LC-1   | 6,555,000 | 298,507 | 228     | -45 | 160            |
| LCO-1  | 6,554,776 | 298,605 | 321     | -50 | 545.3          |
| LCO-2  | 6,555,118 | 298,297 | 140     | -60 | 596.35         |
| LCO-3  | 6,555,360 | 298,537 | 130     | -60 | 300            |
| LCO-4  | 6,555,409 | 298,560 | 123     | -50 | 300            |
| LCD-11 | 6,554,949 | 298,586 | 315     | -70 | 518.7          |
| LCD-12 | 6,554,634 | 298,778 | 315     | -61 | 1028.75        |
| LCD-13 | 6,554,710 | 298,516 | 315     | -55 | 675.80         |
| LCD-14 | 6,555,003 | 298,791 | 315     | -60 | 486.95         |
| LCD-15 | 6,554,676 | 298,375 | 315     | -55 | 401.30         |

## Appendix D - Historical Significant Intercept Table – Lana Corina Project

| Hole # | Significant Intercept Width (m) | Cu % | Mo ppm | From | To  |
|--------|---------------------------------|------|--------|------|-----|
| COR-2  | 70                              | 1.23 | -      | 0    | 70  |
| LAN-1  | 80                              | 0.67 | -      | 0    | 80  |
| LC-1   | 154                             | 0.70 | -      | 0    | 154 |
| LCO-1  | 132                             | 0.56 | 51     | 324  | 456 |
| LCO-2  | 178                             | 0.72 | 284    | 356  | 534 |
| LCO-3  | 4                               | 0.18 | 75     | 228  | 232 |
| LCO-4  | 6                               | 0.25 | 17     | 232  | 238 |
| LCD-11 | 3                               | 0.69 | 16     | 312  | 315 |
| LCD-12 | 4                               | 0.55 | 59     | 759  | 763 |
| LCD-13 | 207                             | 0.41 | 124    | 274  | 481 |
| LCD-14 | 3                               | 0.47 | 10     | 416  | 419 |

Notes: No top cut has been applied, grade intersections are generally calculated over intervals >0.2% Cu where zones of internal dilution are not weaker than 2m < 0.1% Cu. Bulked thicker intercepts may have more internal dilution between high-grade zones.

## Appendix E - Recent Drillhole Locations and Significant Intercepts

Table E1: Drill Hole Locations

| Prospect    | Hole No. | Easting | Northing | Elevation | Azimuth | Inclination | Total depth |
|-------------|----------|---------|----------|-----------|---------|-------------|-------------|
| Lana Corina | CMLCD001 | 298380  | 6554936  | 873       | 124     | -75         | 456         |

Notes: No top cut has been applied, grade intersections are generally calculated over intervals >0.2% Cu where zones of internal dilution are not weaker than 2m < 0.1% Cu. Bulkied thicker intercepts may have more internal dilution between high-grade zones
